Megathon X — Final Project Presentation

Why Is This Needed?

Catalog Friction

Large product catalogs make finding relevant items time-consuming and difficult for users.

Inefficient Discovery

Existing search and browse methods often require too much effort to reach specific product details.

THE OPPORTUNITY

Simplify product discovery through a unified, fast, and organized search interface.

Finding relevant products shouldn't feel like a chore.

How We Built It

Robust Backend: Built using FastAPI for high performance and automatic documentation.

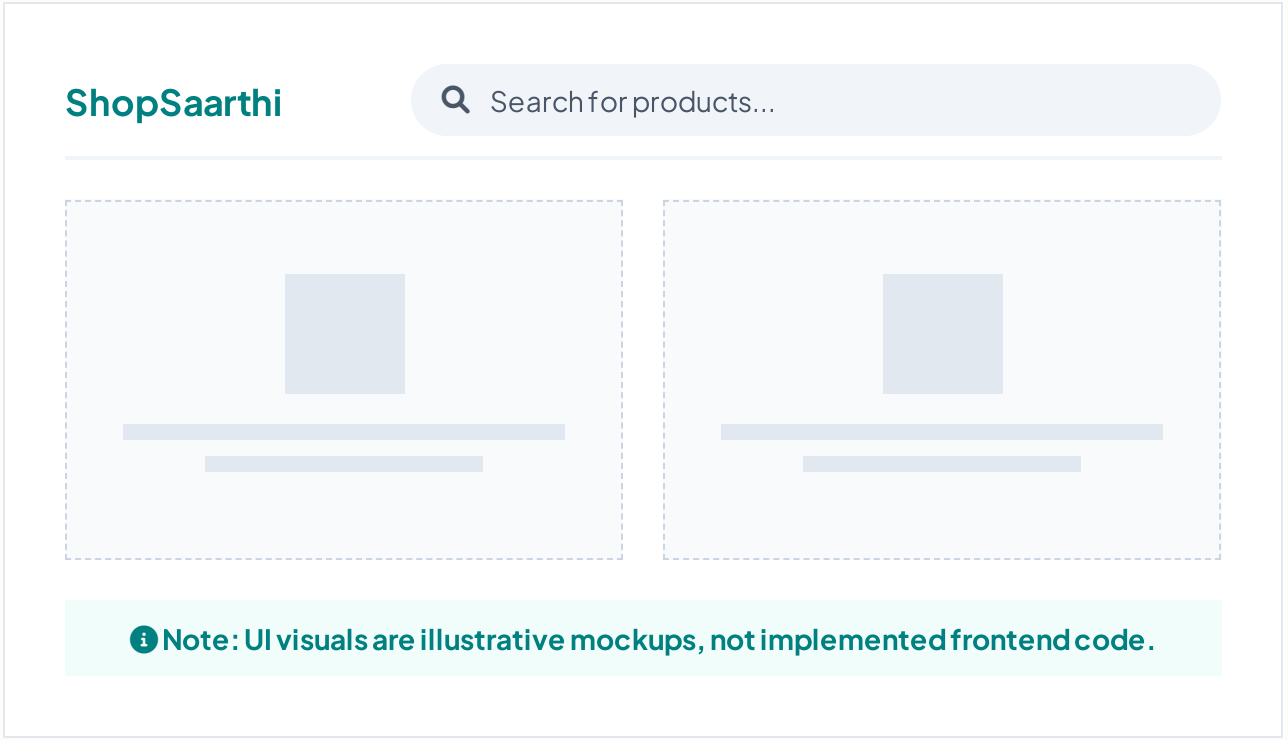

Clear API Endpoints: Dedicated services for listing, searching, and viewing product details.

Rigorous Testing: Verified every endpoint to ensure expected responses for all core requests.

Ready for UI: A clean, predictable API interface ready for frontend integration.

ShopSaarthi in Action

1. Browse entire product catalog
2. Search via keyword or category
3. View detailed product information

What Works So Far?

BACKEND TEST	OBSERVATION	RESULT
Root endpoint (GET /)	Main service entry point check	WORKING
API Documentation (/docs)	Interactive FastAPI docs check	ACCESSIBLE
Product Listing (GET /products)	Catalog retrieval service	WORKING
Search for "headphones"	Keyword-based product search	WORKING
Product Details (GET /products/1)	Specific ID product retrieval	WORKING

Our initial tests confirm that the core product API endpoints are responding as expected.

* Edge-case and end-to-end validation are planned next steps.

Impact & Next Steps

- Test invalid product IDs and unsuccessful search scenarios.
- Improve backend error handling and overall service reliability.
- Verify the complete application flow through the API layer.
- Refine the user interface and prepare for full deployment.

ShopSaarthi — Making Product Discovery Simpler.

Thank You!
